For the year ended 31st December, 2024

1.

Nigerian Aviation Handling Company PLC ("nahco aviance" or "the Company") is a company domiciled in Nigeria with its registered office at Murtala Muhammed International Airport, Ikeja, Lagos. The consolidated financial statements of the Company for the period ended 31st December, 2024 comprise the Company and its subsidiaries (together referred to as the "Group" and individually as "Group entities"). The Group is primarily involved in provision of services including aircraft handling, cargo handling, passenger handling, passenger profiling, crew transportation, energy and power distribution and leasing of ground handling equipment.

2.

Statement of compliance

The financial statements have been prepared in accordance with International Financial Reporting Standards (IFRS).

The financial statements were authorised for issue by the Directors on 29th January, 2025.

Functional and presentation currency

These financial statements are presented in Nigerian Naira, which is the Parent's functional currency. Except as indicated, financial information presented in Naira has been rounded to the nearest thousands.

Basis of measurement

These financial statements are prepared on the historical cost basis.

Use of estimates and judgements

Judgments

In the process of applying the Group's accounting policies, management has made the following judgments, which have the most significant effect on the amounts recognised in the financial statements:

The Group determines the lease term as the non-cancellable term of the lease, together with any periods covered by an option to extend the lease if it is reasonably certain to be exercised.

The Group has several lease contracts that includes extension . The Group applies judgement in evaluating whether it is reasonably certain whether or not to exercise the option to renew the lease. That is, it considers all relevant factors that create an economic incentive for it to exercise either the renewal. After the commencement date, the Group reassesses the lease term if there is a significant event or change in circumstances that is within its control and affects its ability to exercise or not to exercise the option to renew e (e.g., construction of significant leasehold improvements or significant customisation to the leased asset).

Property lease classification – Group as lessor

The Group has entered into commercial property leases on its investment property portfolio. The Group has determined, based on an evaluation of the terms and conditions of the arrangements, such as the lease term not constituting a major part of the economic life of the commercial property and the present value of the minimum lease payments not amounting to substantially all of the fair value of the commercial property, that it retains substantially all the risks and rewards incidental to ownership of these properties and accounts for the contracts as operating leases.

The Group cannot readily determine the interest rate implicit in the lease, therefore, it uses its incremental borrowing rate (IBR) as it relates to each specific subsidiary to measure lease liabilities. The Page 9 of 45

IBR is the rate of interest that the each entity in the Group would have to pay to borrow over a similar term, and with a similar security, the funds necessary to obtain an asset of a similar value to the right-ofuse asset in a similar economic environment. The Group estimates the IBR using the following steps: Step 1:Reference rate: This is generally a government bond reflecting risk free rate. Repayment profile was considered when aligning the term of the lease with the term for the source of the reference rate. Step 2:Financing spread adjustment: Use credit spreads from debt with the appropriate term by considering Company's stand-alone credit rating or similar Company credit rating. Step 3: Lease specific adjustment: Use of market yield for the leased assets, as an additional data point and to check the overall IBRs calculated.

For the year ended 31st December, 2024

Going concern

The group's management has made an assessment of its ability to continue as a going concern and is satisfied that it has the resources to continue in business for the foreseeable future. Furthermore, the Management is not aware of any material uncertainties that may cast significant doubt upon the Group's ability to continue as a going concern. Therefore, the financial statements continue to be prepared on the going concern basis.

Estimates and assumptions

The key assumptions concerning the future and other key sources of estimation uncertainty at the reporting date, that have a significant risk of causing a material adjustment to the carrying amounts of assets and liabilities within the next financial year, are described below. The group based its assumptions and estimates on parameters available when the financial statements were prepared. Existing circumstances and assumptions about future developments, however, may change due to market changes or circumstances arising beyond the control of the Group. Such changes are reflected in the assumptions when they occur.

Re-assessment of useful lives and residual values

The Group carries its PPE at cost in the consolidated and separate statements of financial position. The annual review of the useful lives and residual value of PPE result in the use of significant management judgements.

The preparation of financial statements in conformity with IFRSs requires management to make judgements, estimates and assumptions that affect the application of policies and reported amounts of assets and liabilities, income and expenses. The estimates and associated assumptions are based on historical experience and various other factors that are believed to be reasonable under the circumstances, the results of which form the basis of making the judgements about carrying values of assets and liabilities that are not readily apparent from other sources. Actual results may differ from these estimates.

The estimates and underlying assumptions are reviewed on an ongoing basis. Revisions to accounting estimates are recognised in the period in which the estimates are revised, if the revision affects only that period, or in the period of the revision and future periods, if the revision affects both current and future periods.

Impairment of non-financial assets

Impairment of non-financial assets Impairment exists when the carrying value of an asset or cash generating unit exceeds its recoverable amount, which is the higher of its fair value less costs to sell and its value in use. The fair value less costs to sell calculation is based on available data from binding sales transactions, conducted at arm's length for similar assets or observable market prices less incremental costs for disposing of the asset. The value in use calculation is based on a discounted cash flow model. The cash flows are derived from the budget for the next five years and do not include restructuring activities that the Group is not yet committed to or significant future investments that will enhance the asset's performance of the CGU being tested. The recoverable amount is most sensitive to the discount rate used for the discounted cash flow model as well as the expected future cash inflows and the growth rate used for extrapolation purposes.

Fair value of financial instruments

When the fair value of financial assets and financial liabilities recorded in the consolidated and separate statements of financial position cannot be derived from active markets, their fair value is determined using valuation techniques including the discounted cash flow model. The inputs to these models are taken from observable markets where possible, but where this is not feasible, a degree of judgement is required in establishing fair values. The judgments include considerations of inputs such as liquidity risk, credit risk and volatility. Changes in assumptions about these factors could affect the reported fair value of financial instruments.

Taxes

Uncertainties exist with respect to the interpretation of complex tax regulations, changes in tax laws, the amount and timing of future taxable income. Given the wide range of international business relationships and the long-term nature and complexity of existing contractual agreements, differences arising between the actual results and the assumptions made, or future changes to such assumptions, could necessitate future adjustments to tax income and expense already recorded. The group establishes provisions, based on reasonable estimates, for possible consequences of audits by the tax authorities.

3. Significant accounting policies

The accounting policies set out below have been applied consistently to all periods presented in these financial statements.

(a) Basis of Consolidation

Subsidiaries

The consolidated financial statements comprise the financial statements of the Group and its subsidiaries at 31st December, 2024 Control is achieved when the Group is exposed, or has rights, to variable returns from its involvement with the investee and has the ability to affect those returns through its power over the investee. Specifically, the Group controls an investee if, and only if, the Group has: • Power over the investee (i.e., existing rights that give it the current ability to direct the relevant activities of the investee)

• Exposure, or rights, to variable returns from its involvement with the investee

• The ability to use its power over the investee to affect its returns. Generally, there is a presumption that a majority of voting rights results in control. To support this presumption and when the Group has less than a majority of the voting or similar rights of an investee, the Group considers all relevant facts and circumstances in assessing whether it has power over an investee, including:

• The contractual arrangement(s) with the other vote holders of the investee

• Rights arising from other contractual arrangements

• The Group's voting rights and potential voting rights

The group re-assesses whether or not it controls an investee if facts and circumstances indicate that there are changes to one or more of the three elements of control. Consolidation of a subsidiary begins when the Group obtains control over the subsidiary and ceases when the Group loses control of the subsidiary. Assets, liabilities, income and expenses of a subsidiary acquired or disposed of during the year are included in the consolidated financial statements from the date the Group gains control until the date the Group ceases to control the subsidiary.

Profit or loss and each component of Other Comprehensive Income (OCI) are attributed to the equity holders of the parent of the Group and to the non-controlling interests, even if this results in the non-controlling interests having a deficit balance. When necessary, adjustments are made to the financial statements of subsidiaries to bring their accounting policies into line with the Group's accounting policies. All intra-group assets and liabilities, equity, income, expenses and cash flows relating to transactions between members of the Group are eliminated in full on consolidation.

A change in the ownership interest of a subsidiary, without a loss of control, is accounted for as an equity transaction.

If the Group loses control over a subsidiary, it derecognises the related assets (including goodwill), liabilities, non-controlling interest and other components of equity, while any resultant gain or loss is recognised in profit or loss. Any investment retained is recognised at fair value. *Transactions eliminated on consolidation*

Intra- company balances, and income and expenses (except for foreign currency translation gains or losses) arising from intra- company transactions, are eliminated in preparing the consolidated financial statements. Unrealised losses are eliminated in the same way as unrealised gains, but only to the extent that there is no evidence of impairment.

(b) Foreign currency

Foreign currrency transactions

Transactions in foreign currencies are translated into the respective functional currencies of Group entities at exchange rates at the dates of the transactions. Monetary assets and liabilities denominated in foreign currencies at each reporting date are retranslated to the functional currency at exchange rates as at that date. The foreign currency gain or loss on monetary items is the difference between amortised cost in the functional currency at the beginning of the year, adjusted for effective interest and payments during the year, and the amortised cost in the functional currency translated at the exchange rate at the end of the year.

(c) Property, plant and equipment

Recognition and measurement

Items of property, plant and equipment are carried at cost less accumulated depreciation and impairment losses. Cost includes expenditures that are directly attributable to the acquisition of the asset. The attributable cost of each asset is transferred to the relevant asset category immediately the asset is available for use and depreciated accordingly.

When parts of an item of property, plant and equipment have different useful lives, they are accounted for as separate items (major components) of property, plant and equipment.

Purchased software that is integral to the functionality of the related equipment is capitalised as part of the equipment.

Any gain or loss on disposal of an item of property, plant and equipment (calculated as the difference between the net proceeds from disposal and the carrying amount of the item) is recognised in profit and

Subsequent costs

The cost of replacing part of an item of property or plant is recognised in the carrying amount of the item if it is probable that future economic benefits embodied within the part will flow to the Company and its cost can be measured reliably.

The carrying amount of the replaced component is derecognised. The costs of the day-to-day servicing of property and equipment are recognised in profit or loss as incurred.

Depreciation

Depreciation is recognised in profit or loss on a straight-line basis to write down the cost of each asset, to their residual values over the estimated useful lives of each part of an item of property and equipment. Leased assets under finance lease are depreciated over the shorter of the lease term and their useful lives. Items of property, plant and equipment are depreciated from the date that they are installed and are ready for use, or in respect of internally constructed assets, from the date the asset is completed and available for use. Depreciation ceases at the earlier of the date that the asset is derecognised or classified as held for sale in accordance with IFRS 5. A non-current asset or disposal group is not depreciated while it is classified as held for sale.

The estimated useful lives for the current and comparative period are as follows:

Buildings	50 years
Land	Over the lease period
Computer hardware	3-10 years
Furniture, fittings & equipment	2-10 years
Motor vehicles	4 years
Plant and machinery	5-15 years
Capital work-in-progress	Not depreciated

Depreciation methods, useful lives and residual values are reviewed at each financial year- end and adjusted if appropriate.

De-recognition

An item of property and equipment is derecognised on disposal or when no future economic benefits are expected from its use or disposal. Any gain or loss arising on de-recognition of the asset (calculated as the difference between the net disposal proceeds and the carrying amount of the (asset) is included in profit or loss in the year the asset is derecognised.

(d) Intangible assets

The Group's intangible assets comprise softwares that are not integral part of the related hardware. The intangible assets have finite useful lives and are measured at cost less accumulated amortisation and accumulated impairment losses.

Subsequent expenditure is capitalised only when it increases the future economic benefits embodied in the specific asset to which it relates. All other expenditure is recognised in profit or loss as incurred.

Intangible assets acquired separately

Intangible assets with finite useful lives that are acquired separately are carried at cost less accumulated amortisation and accumulated impairment losses. Amortisation is recognised on a straight-line basis over their estimated useful lives. The estimated useful life and amortisation method are reviewed at the end of each annual reporting period, with the effect of any changes in estimate being accounted for on a prospective basis. Intangible assets with indefinite useful lives that are acquired separately are carried at cost less accumulated impairment losses.

Derecognition of intangible assets

An intangible asset is derecognised on disposal, or when no future economic benefits are expected from use or disposal. Gains or losses arising from derecognition of an intangible asset, measured as the difference between the net disposal proceeds and the carrying amount of the asset are recognised in profit or loss when the asset is derecognised.

Amortisation methods, useful lives and residual values are reviewed at each financial year-end and adjusted if appropriate.

(e) Inventories

Inventories are shown at the lower of cost and net realisable value. Net realisable value is the estimated selling price in the ordinary course of business less the estimated costs of completion and the estimated costs necessary to make the sale. The cost of inventories is determined on the basis of specific identification of their

(f) Financial Instruments

(i) Financial assets

Recognition

Non-derivative financial instruments- recognition and measurement

The Group recognizes a financial asset when it becomes a party to the contractual provisions of the instrument. The Group initially recognizes trade and other receivables on the date of transaction. At initial recognition, the Group measures a financial asset at its fair value plus, in the case of financial asset not measured at fair value through profit or loss, transaction costs that are directly attributable to the acquisition of the financial asset. Transaction cost of a financial asset measured at fair value through profit or loss is recognized as profit or loss. (b) Classification of non-derivative financial assets

Classification and measurement model of non-derivative financial assets are summarized as follows. The Group classifies financial assets at initial recognition as financial assets measured at amortized cost, debt instruments measured at fair value through other comprehensive income, equity instruments measured at fair value through other comprehensive income or financial assets measured at fair value through profit or loss.

(i) Financial assets measured at amortized cost

A financial asset that meets both the following condition is classified as a financial asset measured at amortized cost.

• The financial asset is held within the Group's business model whose objective is to hold assets in order to collect contractual cash flows.

• The contractual terms of the financial asset give rise on specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding.

A financial asset measured at amortized cost is initially recognized at fair value plus transaction cost directly attributable to the asset. After initial recognition, carrying amount of the financial asset measured at amortized cost is determined using the effective interest method, net of impairment loss, if necessary. (ii) Debt instruments measured at fair value through other comprehensive income

A debt instrument that meets both the following condition is classified as a financial asset measured at fair value through other comprehensive income.

The financial asset is held within the Group's business model whose objective is achieved by both collecting contractual cash flows and selling financial assets.
The contractual terms of the financial asset give rise on specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding.

For the year ended 31st December, 2024

A debt instrument measured at fair value through other comprehensive income is recognized initially at fair value plus transaction cost directly attributable to the asset. After initial recognition, the asset is measured at fair value with changes in fair value included as "financial asset at fair value through other comprehensive income" in other comprehensive income. Accumulated gains or losses recognized through other comprehensive income are directly transferred to profit or loss when debt instrument is derecognized.

(iii) Financial assets measured at fair value through profit or loss

When any of the above-mentioned conditions for classification of financial assets is not met, a financial asset is classified as "at fair value through profit or loss" and measured at fair value with changes in fair value recognized in profit or loss.

A financial asset measured at fair value through profit or loss is recognized initially at fair value and its transaction cost is recognized in profit or loss when incurred. A gain or loss on a financial asset measured at fair value through profit or loss is recognized in profit or loss, and presented in "finance income" or "finance cost" in the consolidated statement of income for the reporting period in which it arises. The Group does not designate any debt instrument as at fair value through profit or loss to remove or significantly reduce an accounting mismatch.

Cash and cash equivalents

Cash and cash equivalents comprise of cash, bank balances and call deposits with original maturities of three months or less.

Trade and other payables

Trade and other payables are stated at amortised cost using the effective interest method. Short-duration other payables with no stated interest rate are measured at original invoice amount unless the effect of imputing interest would be significant.

Others

Other non-derivative financial instruments which comprise of loans and receivables, and other financial liabilities are measured at amortised cost using the effective interest method, less any impairment losses. Short-term trade receivables, other receivables, trade payables and other payables with no stated interest rate are carried at original invoice amounts where the effect of discounting is not significant.

(ii) Derecognition of financial assets

The Group derecognises a financial asset when the contractual rights to cash flows from the asset expire, or it transfers the rights to receive the contractual cash flows on the financial asset in a transaction in which substantially all the risks and rewards of ownership of the financial asset are transferred, or has assumed an obligation to pay those cashflows to one or more recipients, subject to certain criteria.

Any interest in transferred financial assets that is created or retained by the Group is recognised as a separate asset or liability.

(i) Financial liabilities measured at amortized cost

The Group derecognizes its financial asset if the contractual rights to the cash flows from the investment expire, or the Group transfers substantially all the risks and rewards of ownership of the financial asset. Any interests in transferred financial assets that are created or continuously retained by the Group are recognized as a separate asset or liability.

ii. Non-derivative financial liabilities

(a) Recognition and measurement of financial liabilities

The Group recognizes financial debt when the Group becomes a party to the contractual provisions of the instruments. The measurement of financial debt is explained in (b) Classification of financial liabilities.

(b) Classification of financial liabilities

A financial liability other than those measured at fair value through profit or loss is classified as a financial liability measured at amortized cost. A financial liability at amortized cost is initially measured at fair value less transaction cost directly attributable to the issuance of the financial liability. After initial recognition, the financial liability is measured at amortized cost based on the effective interest rate method.

(ii) Financial liabilities measured at fair value through profit or loss

A financial liability measured at fair value through profit or loss is initially measured at fair value. After initial recognition, the financial liability is measured at fair value with subsequent changes recognized as profit or loss.

(c) Derecognition of financial liabilities

The Group derecognizes a financial liability when the financial liability is distinguished, i.e. when the contractual obligation is discharged or cancelled or expired.

Impairment of financial assets

The Group recognizes 12-month expected credit loss as loss allowance when there is no significant increase in the credit risk since initial recognition. When there is a significant increase in credit risk since initial recognition, expected credit losses for the remaining life of the financial assets are recognized as loss allowance. Whether credit risk is significantly increased or not is determined based on the changes in default risk. To determine if there is a change in default risk, following factors are considered. However, the Group always measures loss allowance for trade receivables at an amount equal to lifetime expected credit losses.

· External credit rating of the financial asset

- Downgrade of internal credit rating
- · Operating results, such as decrease in sales, decrease in working capital, asset deterioration and increase in leverage

(g) Share Capital

Ordinary Shares

Ordinary shares are classified as equity. Incremental costs directly attributable to the issue of ordinary shares and share options are recognised as deductions from equity, net of any tax effects.

Dividend on ordinary shares

Dividends on the Group's ordinary shares are recognised in equity in the period in which they are paid or, if earlier, approved by the Group's shareholders.

(h) Taxation

Income tax on the profit or loss for the year comprises current tax. Current tax is the expected tax payable on the taxable income for the year, using tax rates enacted at the balance sheet date and any adjustment required for prior period.

Deferred tax is recognised in respect of temporary differences arising between the tax bases of assets and liabilities and their carrying values for financial reporting purposes. Deferred tax is not recognised for the temporary differences on the initial recognition of assets or liabilities in a transaction that is not a business combination and that affects neither accounting nor taxable profit or loss. Currently enacted tax rates are used to determine deferred tax. Deferred tax assets are recognised to the extent that it is probable that future taxable profits will be available against which the temporary difference can be utilised.

(i) Impairment

Financial assets

A financial asset not carried at fair value through profit or loss is assessed at each reporting date to determine whether there is any objective evidence that it is impaired. A financial asset is considered impaired if objective evidence indicates that one or more events have had a negative effect on the estimated future cash flows of the asset.

An impairment loss in respect of a financial asset measured at amortised cost is calculated as the difference between its carrying amount, and the present value of the estimated future cash flows discounted at the original effective interest rate.

Individually significant financial assets are tested for impairment on an individual basis. The remaining financial assets are assessed

collectively in groups that share similar credit risk characteristics. All impairment losses are recognised in profit or loss.

Non-financial assets

The carrying amounts of the Group's non-financial assets, other than inventories, are reviewed at each reporting date to determine whether there is any indication of impairment. If any such indication exists, then the asset's recoverable amount is estimated.

The recoverable amount of an asset is the greater of its value in use and its fair value less costs to sell. In assessing value in use, the estimated future cash flows are discounted to their present value using a pre-tax discount rate that reflects the current market assessments of the time value of money and the risks specific to the asset.

An impairment loss is recognised if the carrying amount of an asset exceeds its estimated recoverable amount. Impairment losses are recognised in profit or loss.

Impairment losses recognised in prior periods are assessed at each reporting date for any indications that the loss has decreased or no longer exists. An impairment loss is reversed if there has been a change in the estimates used to determine its recoverable amount. An impairment loss is reversed only to the extent that the asset's carrying amount does not exceed the carrying amount that would have been determined, net of depreciation or amortisation, if no impairment loss had been recognised.

(j) Non-current assets held for sale

Non-current assets (or disposal groups comprising assets and liabilities) that are expected to be recovered primarily through sale rather than through continuing use are classified as held for sale. Immediately before classification as held for sale, the assets (or components of a disposal group) are measured in accordance with the Group's accounting policies. Thereafter, the assets (or disposal group) are measured at the lower of their carrying amount and fair value less cost to sell. Impairment losses on initial classification as held for sale and subsequent gains or losses on remeasurement are recognised in profit or loss. Gains are not recognised in excess of any cumulative impairment loss.

(k) Employee benefits

Defined contribution plans

A defined contribution plan is a post employment benefit plan under which an entity pays fixed contribution into a separate entity and will have no legal or constructive obligation to pay further amounts. Obligations for contributions to defined contribution pension plans are recognised as an employee benefit expense in profit or loss when they are due. Prepaid contributions are recognised as an asset to the extent that a cash refund or a reduction in future payments is available.

Short-term benefits

Short-term employee benefit obligations are measured on an undiscounted basis and are expensed as the related service is provided.

A liability is recognised for the amount expected to be paid under short-term cash bonus plans if the Group has a present legal or

constructive obligation to pay this amount as a result of past service provided by the employee and the obligation can be estimated reliably.

(l) Provisions

A provision is recognised if, as a result of a past event, the Group has a present legal or constructive obligation that can be estimated reliably, and it is probable that an outflow of economic benefits will be required to settle the obligation. Provisions are determined by discounting the expected future cash flows at a pre-tax rate that reflects current market assessments of the time value of money and, where appropriate, the risks specific to the liability. When some or all of the economic benefits required to settle a provision are expected to be recovered from a third party, a receivable is recognised as an asset if it is virtually certain that reimbursement will be received and the amount of the receivable can be measured reliably.

(m Revenue recognition

Services

Revenue recognition

Services

Revenue from services rendered is recognised in profit and loss in accordance with IFRS 15. All services are rendered and completed at a point in time. Revenue is recognised at the time the peformance obligation is ended

The group is involved in aviation cargo, aircraft handling, crew and passenger transportation service delivery and power distribution. When the services under a single arrangement are rendered in different reporting periods, the consideration is allocated on a relative fair value basis between the services.

Rental income

Rental income from investment property is recognised as revenue on a straight line basis over the term of the lease. Lease incentives granted are recognised as an integral part of the total rental income, over the term of the lease. Rental income from other property is recognised as other income.

Notes to the financial statements

Changes in accounting policies and disclosures

ii Impact of application of IFRS 9 Financial instruments

IFRS 9 Financial Instruments replaces IAS 39 Financial Instruments: Recognition and Measurement for annual periods beginning on or after 1 January 2018, bringing together all three aspects of the accounting for financial instruments: classification and measurement; impairment; and hedge The Company and its subsidiaries applied IFRS 9 prospectively, with an initial application date of 1

January 2018. The Company has not restated the comparative information, which continues to be reported under IAS 39. Differences arising from the adoption of IFRS 9 have been recognised directly

The effect of adopting IFRS 9 as at 1 January 2018 was, as follows:

The nature of these adjustments are described below:

a Classification and measurement

Under IFRS 9, debt instruments are subsequently measured at fair value through profit or loss, amortised cost, or fair value through OCI. The classification is based on two criteria: the company's business model for managing the assets; and whether the instruments' contractual cash flows represent 'solely payments of principal and interest' on the principal amount outstanding.

The assessment of the company's business model was made as of the date of initial application, 1 January 2018. The assessment of whether contractual cash flows on debt instruments are solely comprised of principal and interest was made based on the facts and circumstances as at the initial recognition of the assets.

The classification and measurement requirements of IFRS 9 did not have a significant impact to the Company.

The following are the changes in the classification of the Company's financial assets:

Trade and other receivables, cash and short-term deposits classified as Loans and receivables as at 31 December 2017 are held to collect contractual cash flows and give rise to cash flows representing solely payments of principal and interest. These are classified and measured as Debt instruments at amortised cost beginning 1 January 2018.

The Group Company has not designated any financial liabilities as at fair value through profit or loss.

There are no changes in classification and measurement for the Company's financial liabilities.

In summary, upon adoption of IFRS 9, the Company had the following required or elected reclassifications as at 1 January 2018.

b Impairment of Financial assets

The adoption of IFRS 9 has fundamentally changed the company's accounting for impairment losses for financial assets by replacing IAS 39's incurred loss approach with a forward-looking expected credit loss (ECL) approach. IFRS 9 requires the Company to recognise an allowance for ECLs for all debt instruments not held at fair value through profit or loss.

Upon adoption of IFRS 9, the company recognised impairment on the company's short-term deposits of N6.85 million and reversal on Trade receivables of N370 million which resulted in an increase in Retained earnings of N363.87 million as at 1 January 2018.

Set out below is the reconciliation of the ending impairment allowances in accordance with IAS 39 to the opening loss allowances determined in accordance with IFRS 9:

NAHCO PLC

Changes in accounting policies and disclosures New and amended standards and interpretations

IFRS 16 Leases

IFRS 16 supersedes IAS 17 Leases, IFRIC 4 Determining whether an Arrangement contains a Lease, SIC-15 Operating Leases-Incentives and SIC-27 Evaluating the Substance of Transactions Involving the Legal Form of a Lease. The standard sets out the principles for the recognition, measurement, presentation and disclosure of leases and requires lessees to recognise most leases on the balance sheet.

Lessor accounting under IFRS 16 is substantially unchanged from IAS 17. Lessors will continue to classify leases as either operating or finance leases using similar principles as in IAS 17. Therefore, IFRS 16 does not have an impact for leases where the Group is the lessor.

The Group adopted IFRS 16 using the modified retrospective method of adoption, with the date of initial application of 1 January 2019. The Group elected to use the transition practical expedient to not reassess whether a contract is, or contains, a lease at 1 January 2019. Instead, the Group applied the standard only to contracts that were previously identified as leases applying IAS 17 and IFRIC 4 at the date of initial application.

For the year ended 31st December, 2024

(n) Finance income and expense

Finance income comprise of interest on funds invested. Finance costs comprise interest expense on borrowings, exchange differences on financial instruments and bank charges.

Borrowing costs that are not directly attributable to the acquisition, construction or production of a qualifying asset are recognised in the

profit and loss using the effective interest method.

Foreign currency gains and losses are reported on a net basis as either finance income or finance cost depending on whether foreign currency movements are in a net gain or net loss position except for foreign currency translation differences recorded in other

Policy on leases prior to 1 January 2019

(o) Leased assets

Leases in term of which the Company, as a Lessee, assumes substantially all the risks and rewards of ownership are classified as finance leases. Upon initial recognition, the leased asset is measured at an amount equal to the lower of its fair value and the present value of the minimum lease payments. Subsequent to initial recognition, the asset is accounted for in accordance with the accounting policy applicable to that exact

(p) Lease Payments

Payments made, as a Lessee, under operating leases are recognised in profit and loss on a straight-line basis over the term of the lease.

Minimum lease payments made under finance leases are apportioned between the finance expense and the reduction of the outstanding liability. The finance expense is allocated to each period during the lease term so as to produce a constant periodic rate of interest on the remaining balance of the liability.

Determining whether an arrangement contains a lease

At inception of an arrangement, the Company determines whether such an arrangement is or contains a lease. A specific asset is the subject

to a lease if fulfilment of the arrangement is dependent on the use of that specified asset. An arrangement conveys the right to use the asset

if the arrangement conveys to the Company the right to control the use of the underlying asset.

At inception or upon reassessment of the arrangement, the Group separates payments and other considerations required by such an

Policy on leases from 1 January 2020

The Group assesses at contract inception whether a contract is, or contains, a lease. That is, if the contract conveys the right to control the use of an identified asset for a period of time in exchange for consideration.

Group as a lessee

The Group applies a single recognition and measurement approach for all leases. The Group recognises lease liabilities to make lease payments and right-of-use assets representing the right to use the underlying assets.

i) Right-of-use assets

The Group recognises right-of-use assets at the commencement date of the lease (i.e., the date the underlying asset is available for use). Right-of-use assets are measured at cost, less any accumulated depreciation and impairment losses, and adjusted for any remeasurement of lease liabilities. The cost of right-of-use assets includes the amount of lease liabilities recognised, plus any accrued lease liabilities or prepayments. Right-of-use assets are depreciated on a straight-line basis over the shorter of the lease term and the estimated useful lives of the assets, as follows:

- Office building 15-20 years
- Land 15-20years

If ownership of the leased asset transfers to the Group at the end of the lease term or the cost reflects the exercise of a purchase option, depreciation is calculated using the estimated useful life of the asset. The right-of-use assets are also subject to impairment. Refer to the Accounting policies in section (2) Impairment of non-financial assets.

(r) Earnings per share

The Group presents basic earnings per share (EPS) data for its ordinary shares. Basic EPS is calculated by dividing the profit or loss attributable to ordinary shareholders of the Group by the weighted average number of ordinary shares outstanding during the period.

4. Determination of fair values

A number of the Company's accounting policies and disclosures require the determination of fair value, both for *Trade and other receivables*

The fair value of trade and other receivables is estimated as the present value of the future cash flows, discounted at

liabilities

Fair value which is determined for disclosure purposes, is calculated based on the present value of future principal and interest cash flows, discounted at the market rates of interest at the reporting date. For trade and other creditors with a remaining life of less than one year, the notional amount is deemed to reflect the fair value.

5. Revenue

The Company's revenue represents the amount invoiced to customers for passenger handling, ground handling and cargo less trade discounts but excluding value added tax.

	Group		Company		
	Dec-24	Dec-23	Dec-24	Dec-23	
	N '000	N'000	N '000	N'000

Trade & Other payables (Note 28)	13,837,717	10,234,148
Lease Liabilities (Note 27b)	1,028,052	
Total financial liabilities	13,837,717	10,234,148
Net cover	5,926,184	806,136

The maturity profile of the Group's lease liabilites based on contractual undiscounted payments are disclosed as follows:

	On demand	Within 1 year	2-5years	> 5 years
	N'000	N'000	N'000	N'000
Lease liabilities	136,806	205,428	730,977	2,590,141

Liquidity risk is the risk that the Group will encounter difficulty in meeting the obligations associated with its financial liabilities that are settled by delivering cash or another financial asset. The Group's approach to managing liquidity is to ensure, as far as possible, that it will always have sufficient liquidity to meet its liabilities as at when due, under both normal and stressed conditions, without incurring unacceptable losses or risking damage to the Group's reputation.

The Group uses activity-based costing to cost its products and services, which assists it in monitoring cash flow requirements and optimising its cash return on investments. Typically, the Group ensures that it has sufficient cash on demand to meet expected operational expenses for a period of 60 days, including the servicing of financial obligations; this excludes the potential impact of extreme circumstances that cannot reasonably be predicted, such as natural disasters.

Securities Trading Policy

In compliance with 17.15 Disclosure of Dealings in Issuers' Shares, Rulebook of the Exchange 2015 (Issuers Rule) **Nigerian Aviation Handling Company Plc** maintains a Security Trading Policy which guides Directors, Audit Committee members, employees and all individuals categorized as insiders as to their dealing in the Company's shares. The policy undergoes periodic reviews by the Board and is updated accordingly. The Company has made specific inquiries of all its directors and other insiders and is not aware of any infringement of the policy during the period.
